The choice is simple.

“T-L delivers nutrient w

... and delivers it more dependably and evenly than any other irrigation system.”

T-L Irrigation systems are the most highly **productive and dependable** water management tools you can find.

For more than fifty years, T-L has designed and manufactured irrigation systems known for their simplicity, quality and adaptability to unique applications. That experience helps assure T-L owners of success in their irrigation investments. Nutrient water managers say it is critical to deliver the effluent dependably to a crop according to a specific schedule. The last thing they want to hear is “the system is down!”

T-L irrigation systems are hydrostatically driven and move continuously unlike electrically powered systems that start and stop thousands of times in the course of a day. Continuous movement significantly reduces gearbox wear and maintenance cost and is backed by the best gearbox warranty available...up to 8 years and 24,000 hours! Continuous movement also assures even distribution of nutrient water across the crop, improving production.

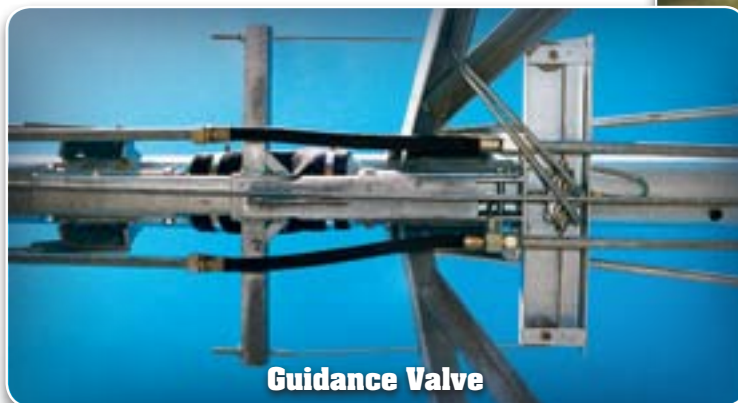

T-L's hydrostatic design also eliminates electrical component corrosion so common on electrically driven systems. High voltage electricity does not exist in T-L systems, eliminating safety concerns, expensive electrical components, and the need for electrical experts to do repairs.
