

One Span Linear

Irrigation Systems

One Span Linear

The most uniform water pattern available

The choice is simple.

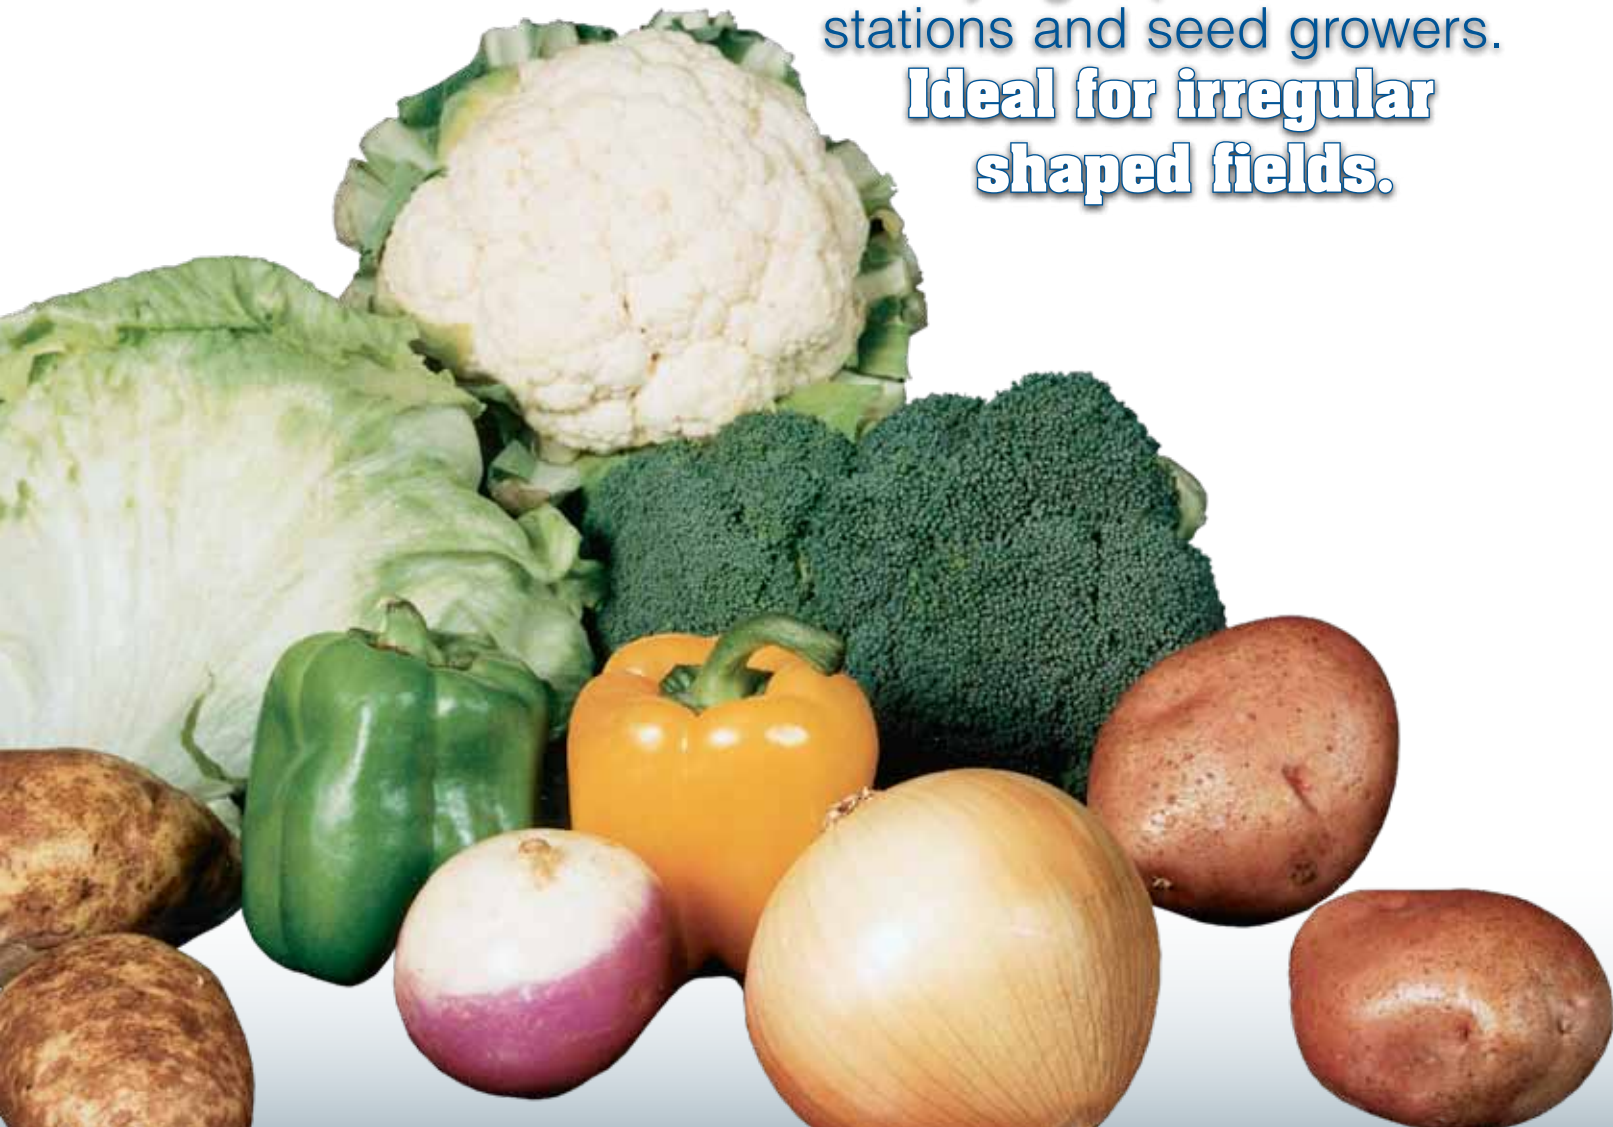

One Span Linears reward you with increased crop quality & yield.

The difference is continuous movement and even water distribution.

Easier on You — For Life.

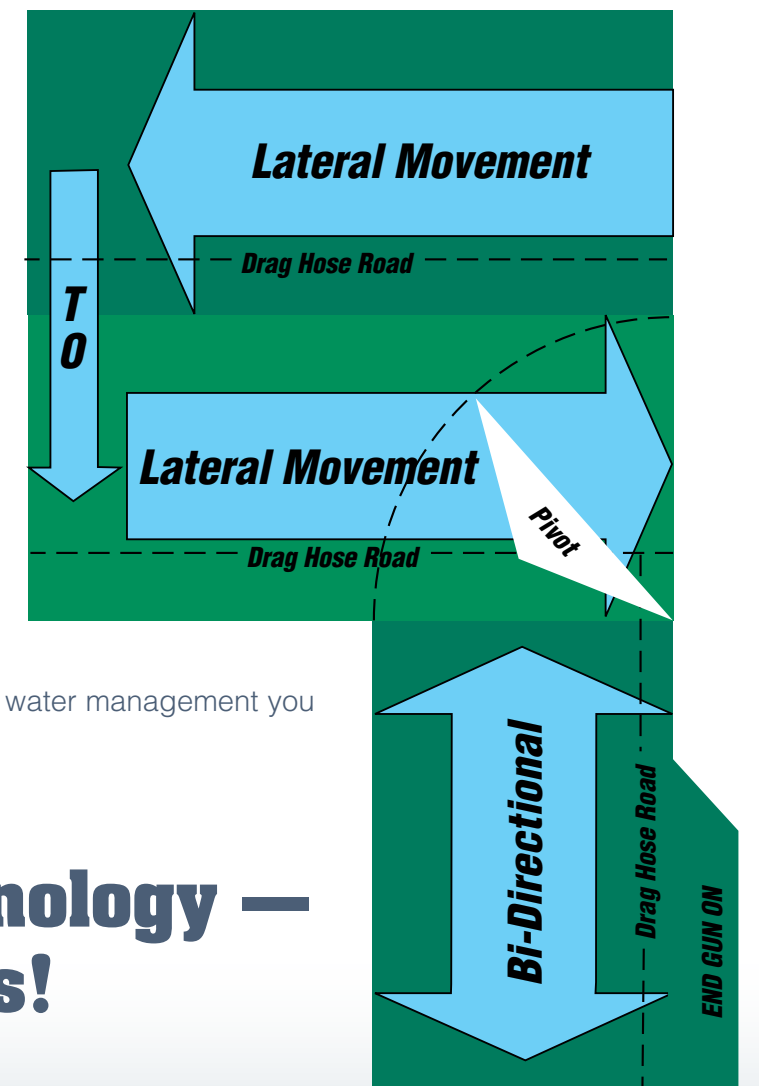

Ideal for vegetables, berries, produce and turf farms. Preferred by ag experimental stations and seed growers. Ideal for irregular shaped fields.

T-L One Span Linear systems produce higher yields through even water distribution, the result of hydrostatic drive design and its continuous movement. Add low pressure versatility and uniform water patterns and the benefits grow. One Span Linears can be designed to irrigate irregular and smaller fields, irrigate widths from 120' to 550", deliver water through a drag hose OR check out T-L's revolutionary new **Linear Docking System** that follows its own water supply line!

T-L's exclusive Scissor Lift uses system hydraulics and allows preparation for moving in minutes eliminating the work, time and aggravation involved in moving electric pivot systems.

Your success is measured by your crop's quality and yield. As a owner or manager, **T-L's One Span Linear** will give you the design flexibility and water management you are looking for.

T-L, Proven Technology — That Works!
